DevLoops Consulting

Modernizing infrastructure through cloud-native engineering.

Cloud architecture, infrastructure modernization, cost engineering, and AI-ready platforms.

We architect, modernize, and optimize cloud infrastructure. You get scalable, cost-efficient, AI-ready platforms.

THE PROBLEM

Does this sound familiar?

Releases are slow and risky

Deploys are manual. Every release needs a war room. Features wait weeks to ship.

The cloud bill keeps growing

Nobody owns the spend. Resources stay on after the work ends.

Production breaks too often

Incidents repeat. Monitoring is weak. Key knowledge sits with one person.

AI plans, but no platform

The team wants to train and serve models. There is no GPU or MLOps foundation.

Cloud and Kubernetes

Cloud Consulting & Migrations

Expert guidance on cloud strategy, architecture design, and seamless migrations.

- Cloud readiness assessments
- Target architecture design
- Migration planning and execution
- Hybrid and multi-cloud design
- Governance model definition

Kubernetes & Serverless Adoptions

Assess, design, and implement production-grade cloud-native platforms.

- Cluster architecture, setup, and lifecycle
- Hardening: RBAC, networking, observability
- Containerize and modernize legacy apps
- Serverless architecture and delivery
- DevSecOps and GitOps practices

Cost and AI infrastructure

Cloud Cost Optimization

Improve cloud efficiency through cost visibility, right-sizing, and FinOps governance.

- Spend analysis and cost visibility reports
- Right-sizing and workload optimization
- Reserved Instance and Savings Plan strategy
- FinOps practice and governance framework
- FinOps tooling and cost allocation setup

AI Readiness & AI Infrastructure

Scalable, cost-efficient infrastructure for training and inference.

- AI readiness assessment
- GPU labs for experiments and prototypes
- Production GPU cluster design and setup
- GPU sharing: MIG, time-sharing, DRA
- Training and inference platforms
- MLOps architecture and workflows
- Observability and tuning for AI systems

Grow your team's capability

Technical Training & Workshops

Build internal engineering capability across cloud-native and AI platforms.

- Kubernetes and cloud-native deep dives
- DevSecOps and GitOps implementation
- FinOps and cost engineering
- AI infrastructure and MLOps
- Production readiness and reliability

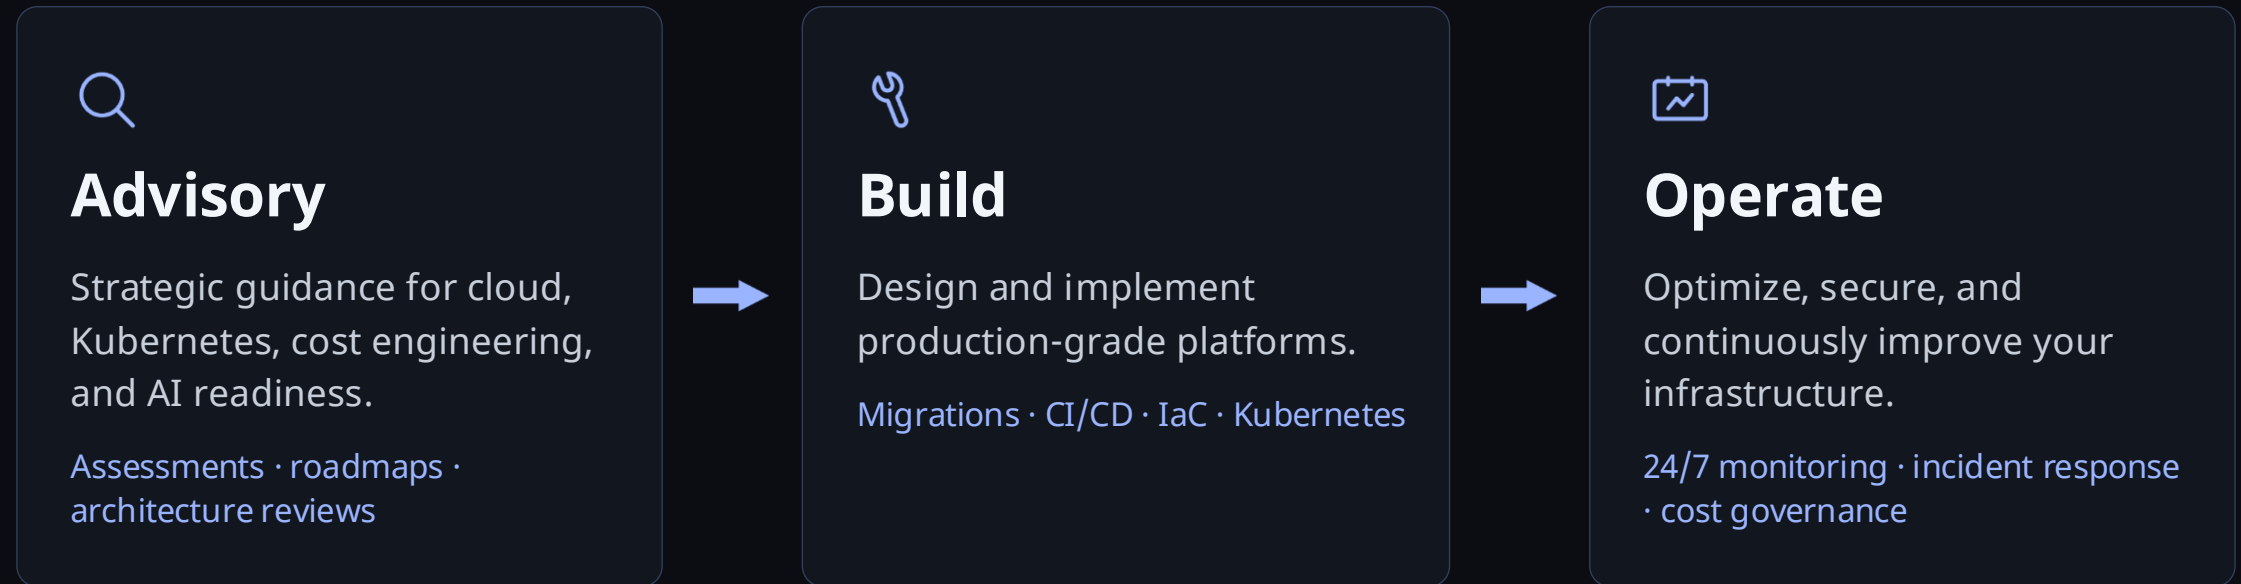

Embedded Engineering Support

Add senior cloud and Kubernetes expertise to your team.

- Fractional Cloud Architect
- Kubernetes Platform Engineer
- DevSecOps / SRE support
- AI Infrastructure Engineer (GPU & MLOps)
- Short-term modernization task forces

Advisory, Build, Operate

Start at any stage. Each stage has its own scope and price.

20+ years building and running production infrastructure.

100%

Uptime held for 1.5+ years on a live AI learning platform.

Autonomy

Critical-systems infrastructure for autonomous vehicles and robots in the UAE.

SaaS to IoT

Platforms across SaaS, mobility, IoT, and AI, from startups to enterprises.

TRACK RECORD

Where the experience comes from

VentureOne

Lead Cloud Architect

Cloud platform for autonomous-mobility orchestration, piloted in the UAE.

TII, Abu Dhabi

Senior DevOps Engineer

Resilient infrastructure for autonomous robotics and AI model deployment.

CoLearn

Director of Engineering

AI learning platform. 100% uptime for 1.5+ years.

Zoomcar

Assoc. Director, DevOps

DevOps leadership for a car-sharing platform.

Fybr

VP SysOps

Operations for an end-to-end IoT platform.

Freshdesk

Release Manager

Release engineering for a SaaS helpdesk product.

START SMALL

The 48-hour AWS waste review

A fixed-scope first project. Low risk for you. A ranked list of savings to act on.

01

You send the data

Export your AWS Cost Explorer data or billing CSV files.

02

We find the waste

We analyze your spend in 48 hours.
We rank each finding by impact.

03

We walk you through it

A 30-minute call to explain each finding and the next steps.

Independent advice

We resell nothing. No long contract. You keep the findings.
